

USER GUIDE

ClubKit App Builder

The purpose of the ClubKit

- Create your app
- Publish it on the App Store
- Publish it on the Play Market

ClubKit is a mobile app builder on your smartphone. ClubKit users can **create an app** for iOS and/or Android using a widget sets **for free**. To publish an application on the App Store and Play Market, you purchase a subscription and the ClubKit command will help you publish your application. Pay only for publication and support!

We strive to make the development of applications services accessible and simple for businesses and creators. Mobility and available functionality of ClubKit allow users to create and launch an online store, service agency, blog, or shop of authoring products in a few clicks!

This simple and concise guide will help you take the **first steps in developing mobile applications with ClubKit!**

Best wishes,
ClubKit team!

- Contacts
- Contact person
- Map (Basic)
- Map
- Delivery details
- Order details

 **Feed**
Category Description

- Location
- Dates/Time
- Contacts

Add products

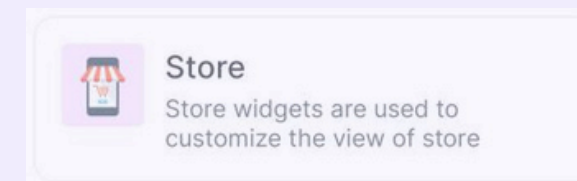

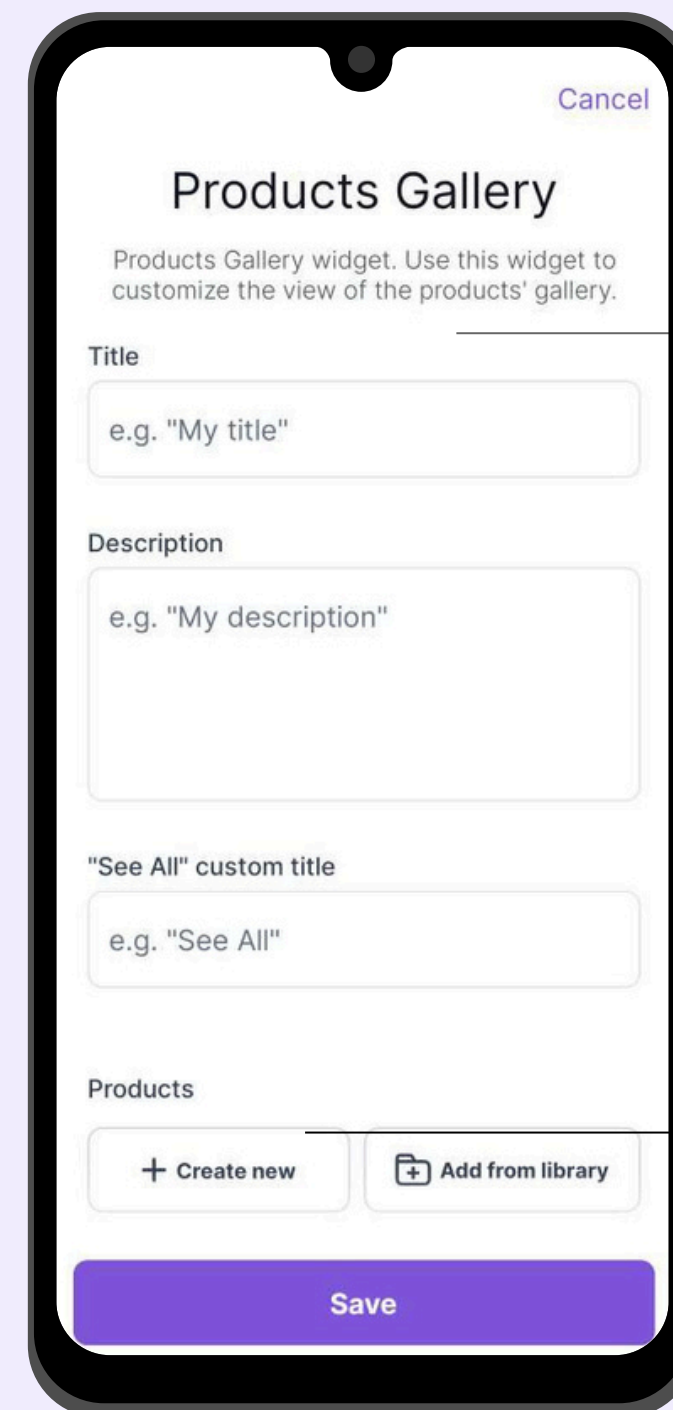

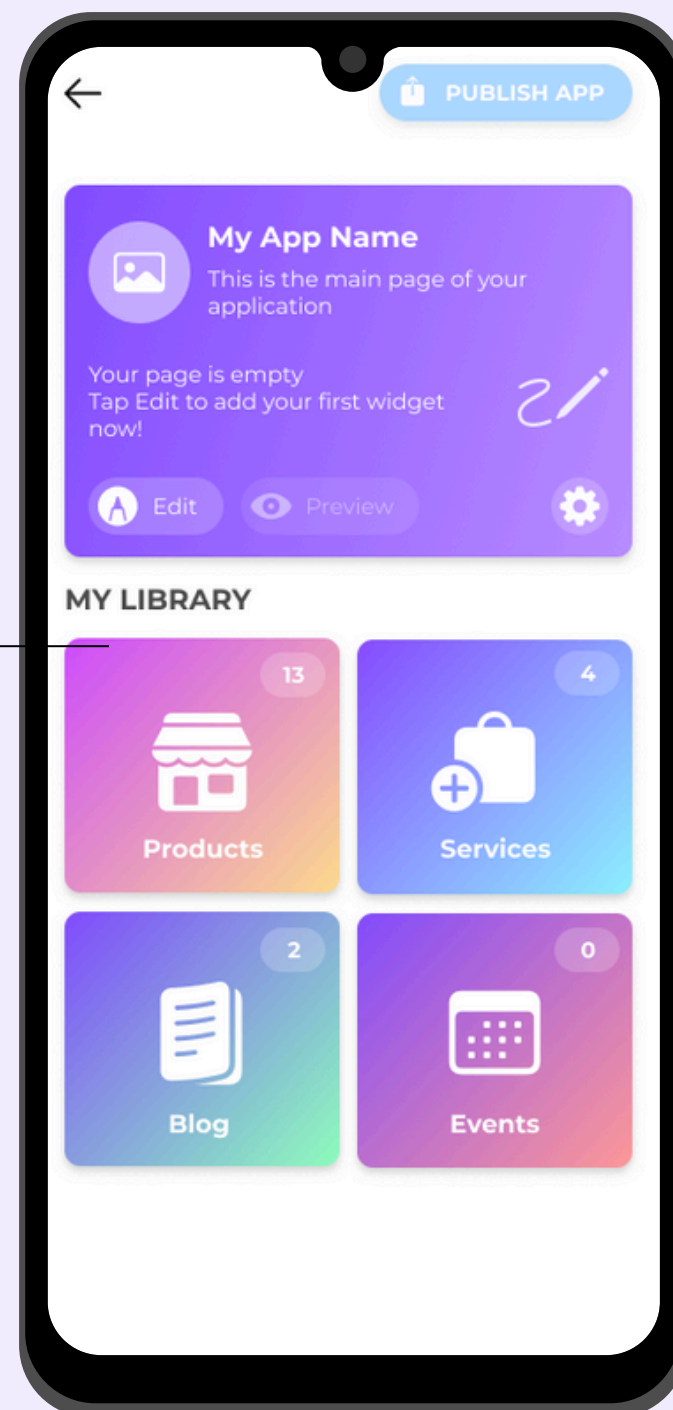

There are two ways to add products/services: through the library or during the process of filling landing with widgets. If you have plenty of items to add, we recommend to use the library.

Note! The manual describes the algorithm for products adding processes. When adding services, the processes are identical. Use the 'Services' widget to add it on landing.

○ Your library

On the main app editor page, you see a library that contains 4 sections: Products, Services, Blog, Events. Click to cell to fill library with appropriate content.

Note! You need to add at least one item to make your future users see the group.

When add widgets to the landing, open the 'Store' group and choose 'Product gallery'. Fill in fields with required information.

○ Create a product

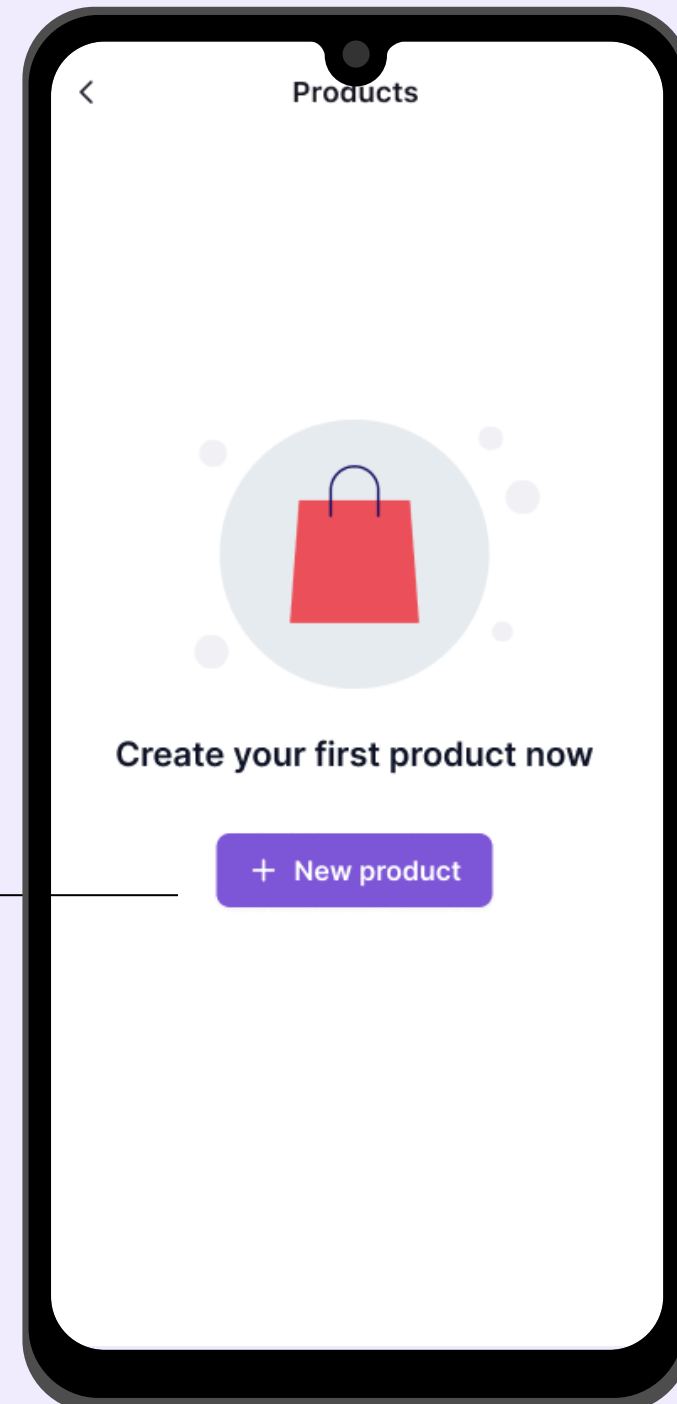

When you add a store Product gallery widget, you can create a new product. Click the 'Create new' button, and the screen of product creation will open.

Add content to the library

If you add products through the library, click on the cell you need (here Products)

○ Create new product

Click to open product creation screen.

A 'New Product' creation form. At the top, there's a back arrow and the title 'New Product'. Below that is a 'Product Icon' section with a light blue square containing a camera icon and a plus sign. Underneath are several fields: 'Name' with a text input 'Enter product name'; 'Description' with a text area 'Enter description' and a character count '245/300'; 'Price' with a text input '15 334' and a currency dropdown 'USD'; and 'Category' with a list of categories: 'My Category #1', 'My Category #2', 'My Category #3' (which is selected with a checkmark), and 'My Category #4'. Each category has edit and delete icons. At the bottom of the category list is a text input 'My category name' and a purple '+ Add' button. At the very bottom is a large purple 'Create' button.

○ Add icon

Click here to add an image of a product from your photo library or make a photo. Note! Provide required app permissions.

○ Describe info

Product name and its description

○ Price

Describe the price and click to select currency.

○ Category

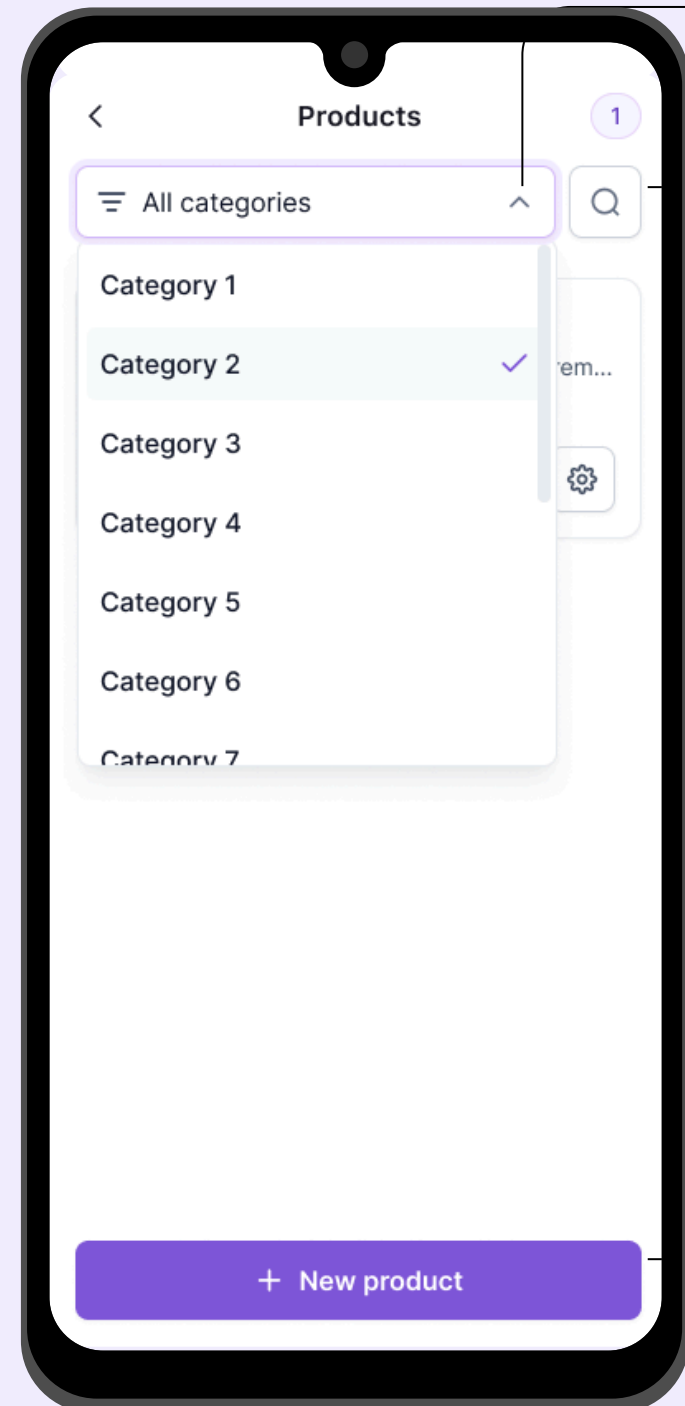

Select, edit or delete categories created before.

○ Add category

Describe category name and click 'Add' to create a new category.

Add content to the library

When you save created product, you automatically see the library screen of products. Now you can view and edit items.

List

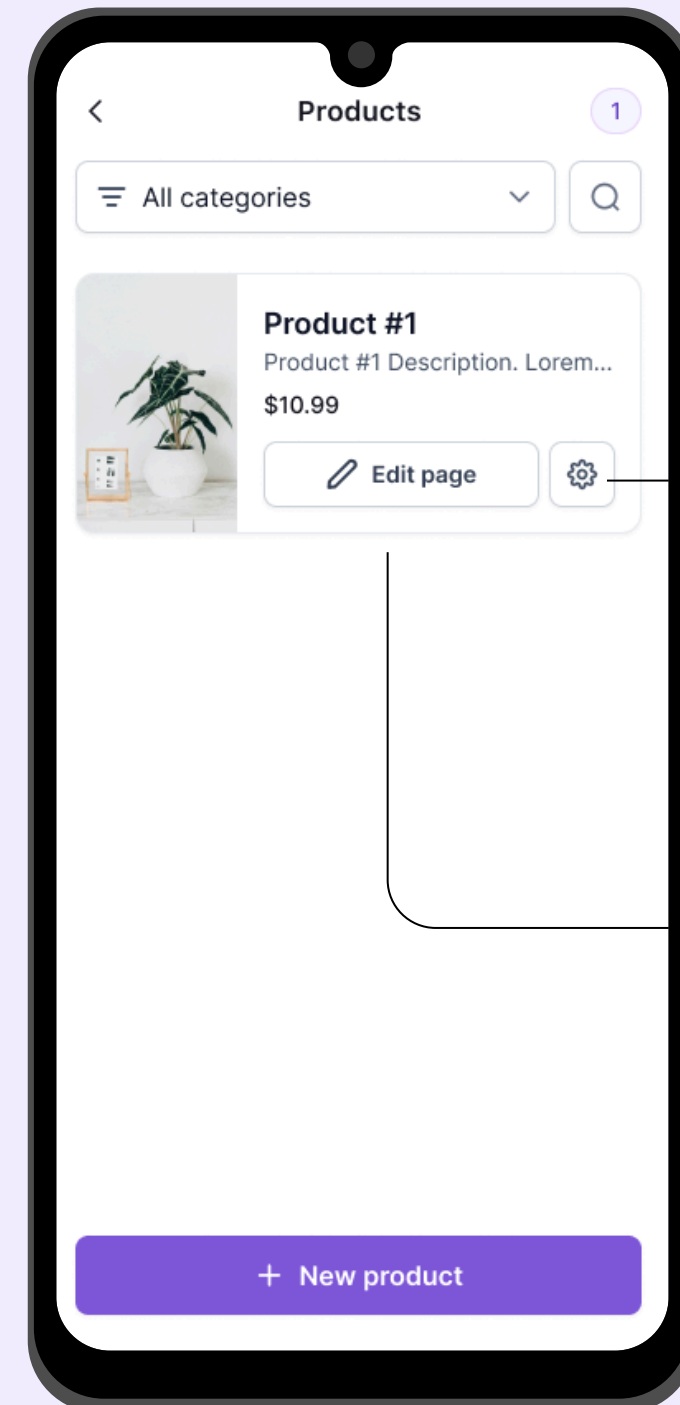

Categories list: Click one selected to filter them

Search

Click to search category or product name

New product

Click to add more products

Item info

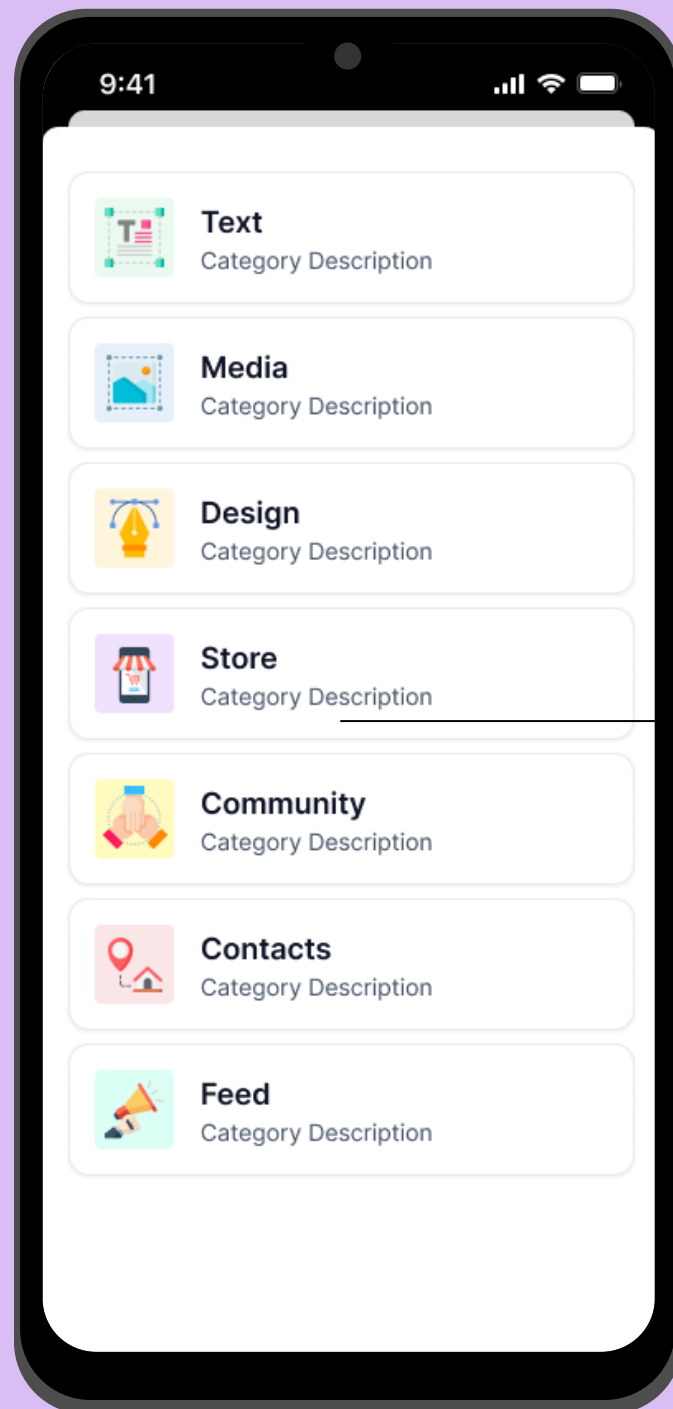

Click to edit item info: name, logo, etc.

Product landing

Click to edit the landing page of the product.

Add content from the library to landing

The store widget includes services too. The 'Community' widget includes events and blog. The actions to add them to your app from the library are the same.

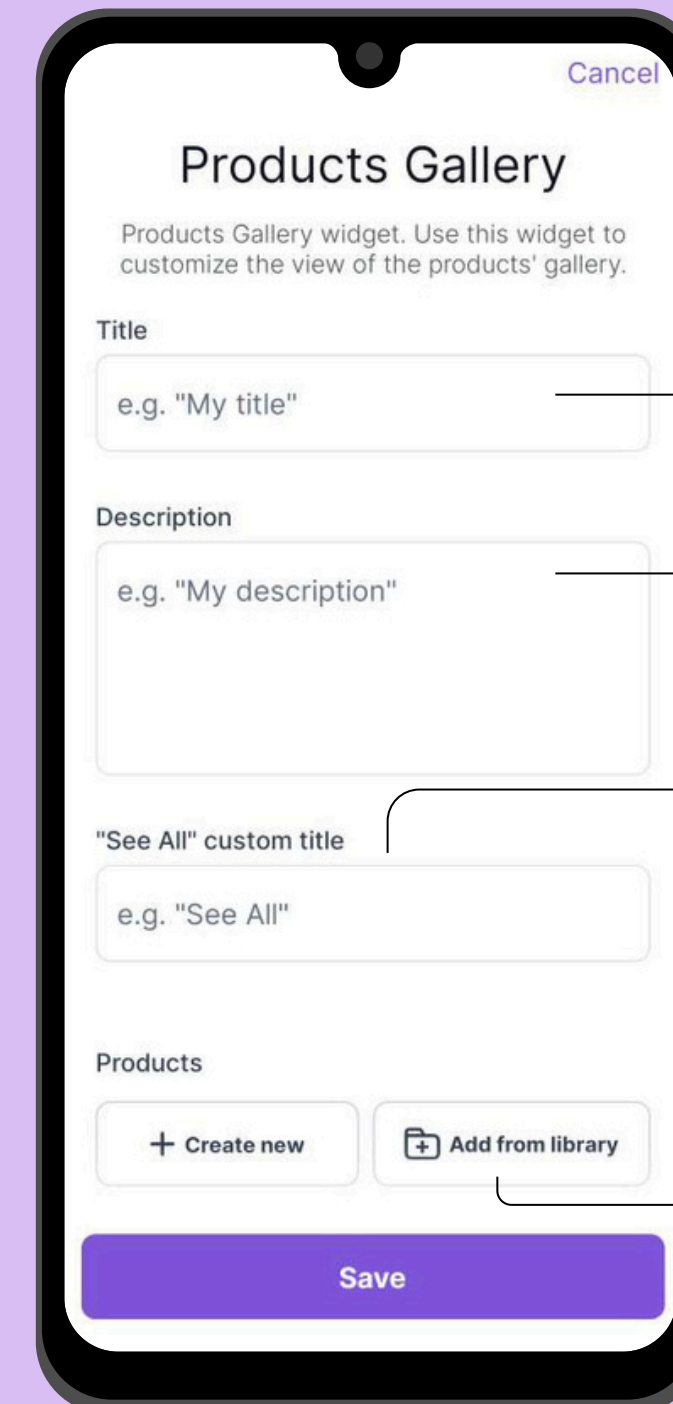

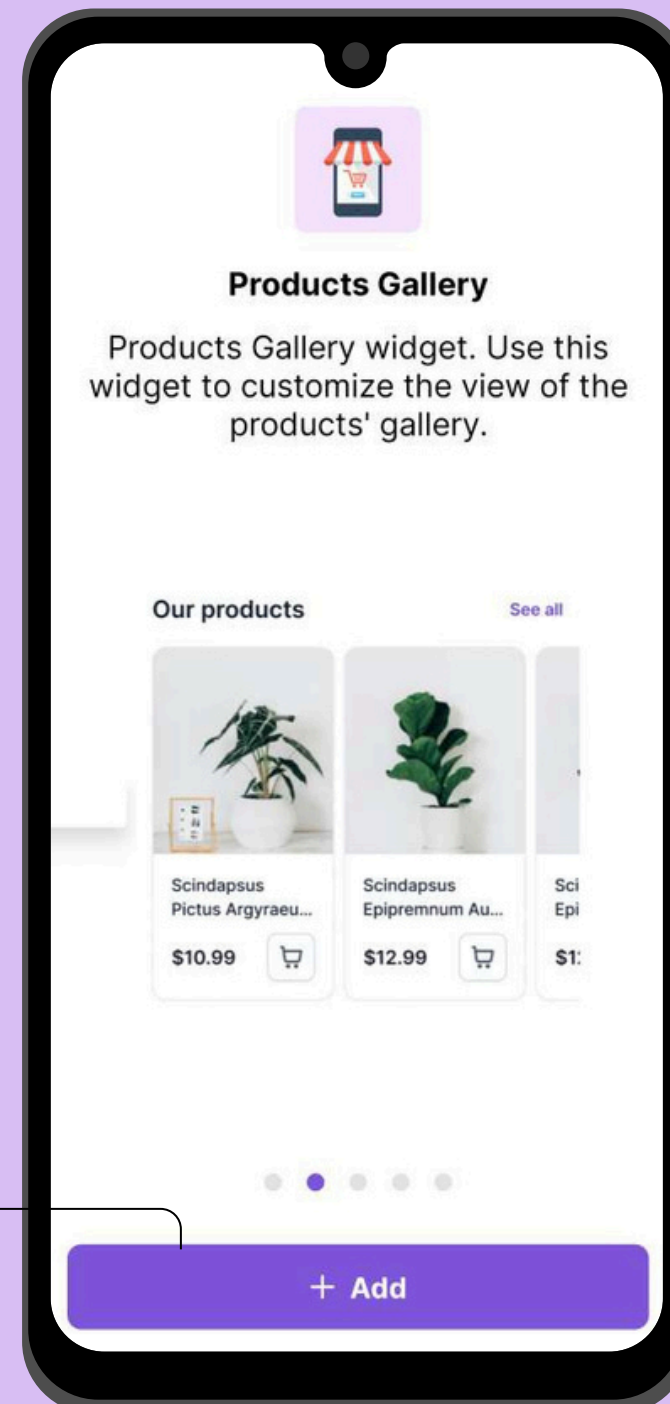

○ Store Widget

Add a new widget on landing. Now select Store widget.

● Add product gallery

Swipe left and choose Product gallery.

● Add info

Describe gallery name and description

○ 'See all' option

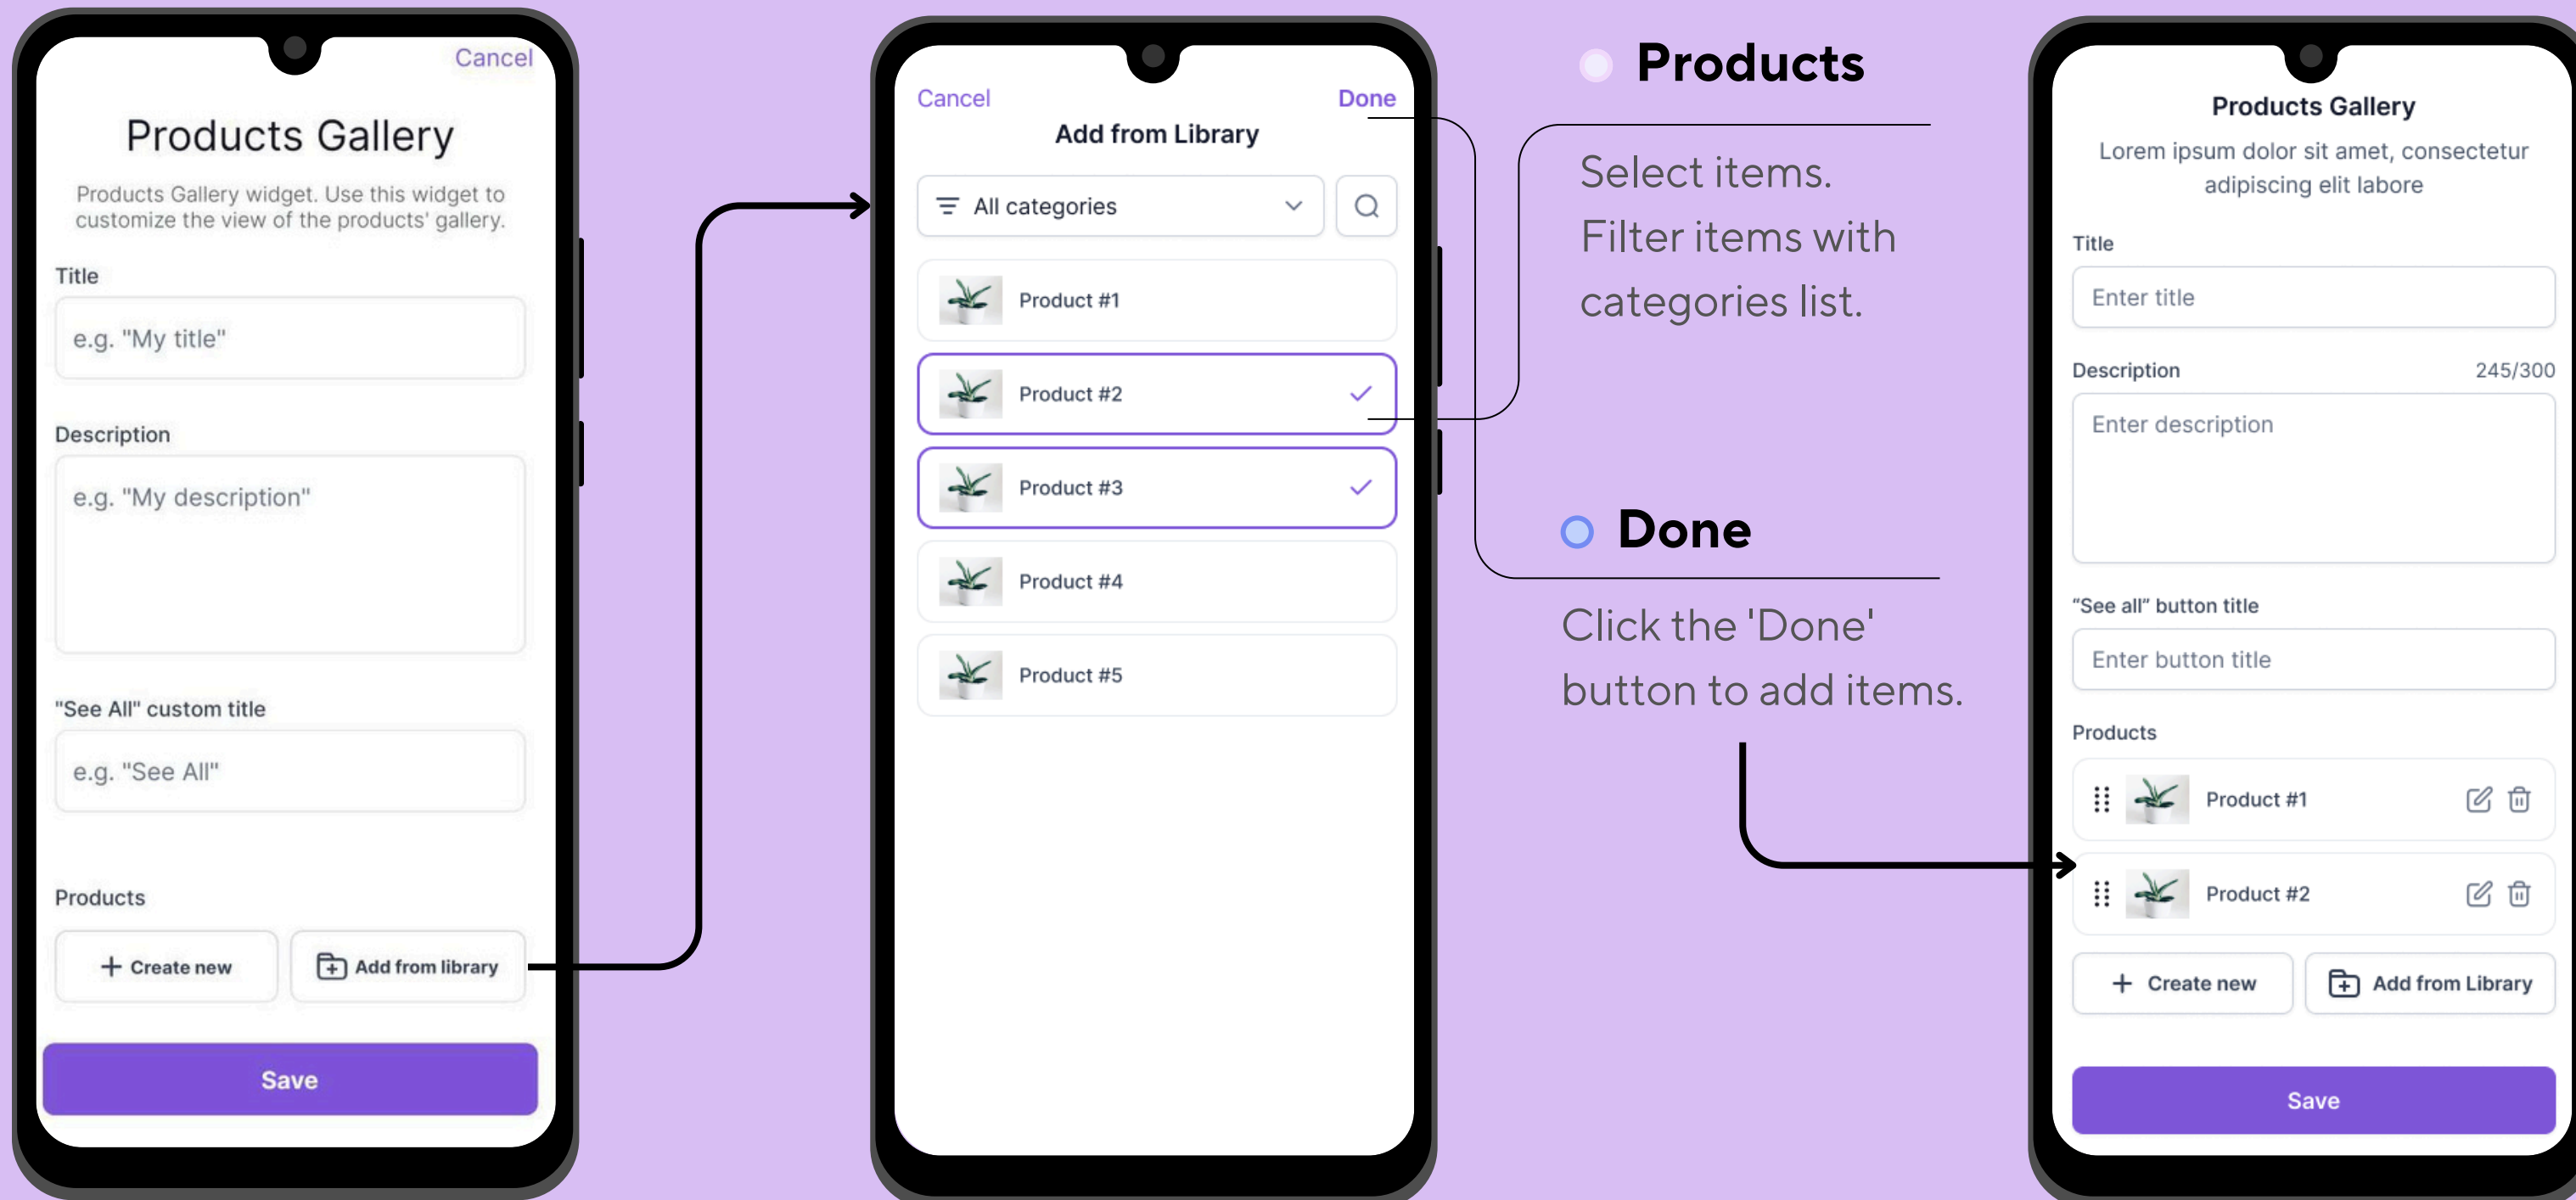

The name of the button that allows user to view all available items.

● Add from library

Click to see items in library.

Add content from the library to landing

The store widget includes services too. The 'Community' widget includes events and blog. The actions to add them to your app from the library are the same.

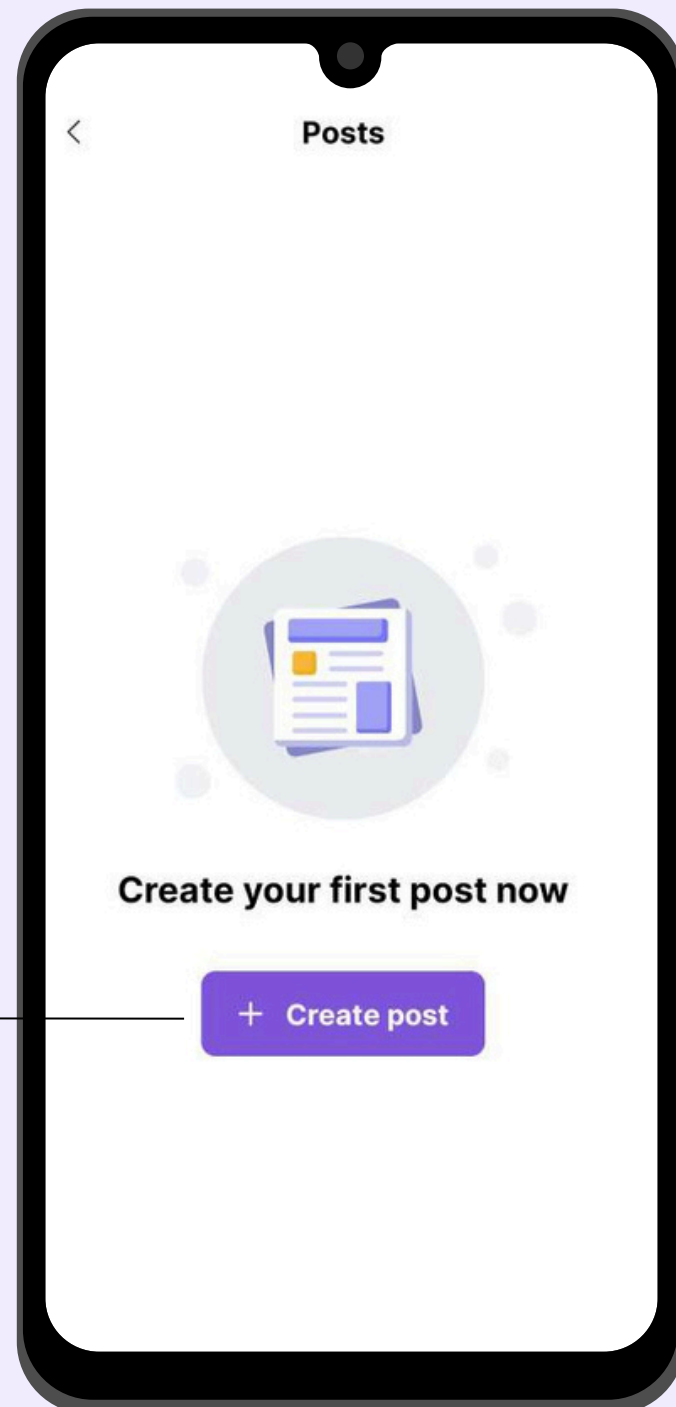

Add articles to library
